

New special session in IJCRS2020

Review of the Year. A Look back at Rough Sets

The goal of the session is to present the most interesting papers about rough sets and related topics, which have already been published between the annual IJCRS editions. Our goal is to bring influential authors who published their papers in prestigious scientific journals and allow them to present and discuss their research with a diverse lineup of rough set experts. The session should also allow the attendees of IJCRS to make a significant update of their knowledge about current trends in rough sets and data science. We hope that this session will provide a means for better exchange of scientific ideas and deeper integration of the rough set community. For obvious legal reasons, the papers accepted for the session will not be published in the IJCRS proceedings, however the authors are encouraged to share with the IJCRS organisers their presentations/slides so as to make them available (after the conference) to all IJCRS attendees and spread the "news".

We would also like to have a look at the opposite direction in time and organise a sub-session:

Back to the Future: Incoming Publications

Therefore very short papers, (2-4)-page long, which are supposed to form a basis for future full articles, are also very welcome. The feedback from the IJCRS participants should allow authors to develop further their original ideas and submit the final version to leading scientific journals. We do hope that discussion of research, which is conducted outside IJCRS, will significantly enrich and popularise the premier rough set conference.

The authors willing to contribute to this special session are asked to send the title and other bibliographic data of their already published paper or the extended abstract (2-4 page long) of current research to:

- Davide Ciucci: davide.ciucci@unimib.it
- Marcin Wolski: maarten.wolski@gmail.com

After the acceptance notification, please register as a regular participant.

Important dates:

- Submission deadline: 23 April
- Acceptance notification: 30 April
